

HPMT Holdings (5291)

Double Bottom Break-out Underway?

Technical Highlights

The stock surged and formed a large green candle at close yesterday. The surge in the trading volume (12.5 times higher than the average 90-days volume) has sent the stock price to close above all its EMA. With the green candle gapped up and substantial trading volume, we think breaking through the 6-month double bottom may be on the cards.

MACD shows momentum is strengthening with the MACD line crossing above the signal line recently. Similarly, short-term bullishness is further affirmed by the RSI hooking up and pending confirmation on the golden cross by the EMA lines.

We think the stock could potentially test the resistance at RM0.396 first and subsequently at RM0.401 (52-week high). Conversely, a dip below RM0.350 support could signal the commencement of a correction phase.

Entry – RM-0.375 – RM0.380
Stop Loss – RM0.345
Target Price – RM0.396 – RM0.401

Technical

Resistance 1 (RM)	0.396
Resistance 2 (RM)	0.401
Support 1 (RM)	0.350
Support 2 (RM)	0.335
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	0.375
52-week High (RM)	0.401
52-week Low (RM)	0.317

Company Profile

HPMT Holdings Berhad is principally involved in manufacturing metal work machinery which include cutting, milling, and drilling tools as well as distributing supporting equipment and accessories.

DS Sigma Holdings (0269)

Uptick on the Radar?

Technical Highlights

The stock seems to have found support at the EMA 20 despite recent multiple swings. A positive wedge pattern was observed, and a breakout may be underway, given the rise in trading volume (approximately 3.5x of the average 90-days volume) and the formation of a large green candle at the close yesterday. The recent swing closing at higher highs and higher lows sequence has built a footing for potential further upswing.

Positive momentum is buoyed by the recent golden cross as exhibited by both the EMA and MACD lines. Likewise, the uptick of the RSI also further confirmed the short-term bullishness of the stock.

We think the stock is likely to put the resistance RM0.452 (52-week high) and RM0.535 to the test if it breaks through the positive wedge pattern. Conversely, consolidation happens if the share price falls below the RM0.405 support (a few ticks below the recent downswing).

Entry – RM0.435 – RM0.440
Stop Loss – RM0.400
Target Price – RM0.452 – RM0.535

Technical

Resistance 1 (RM)	0.452
Resistance 2 (RM)	0.535
Support 1 (RM)	0.405
Support 2 (RM)	0.380
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	0.435
52-week High (RM)	0.452
52-week Low (RM)	0.315

Company Profile

DS Sigma Holdings Berhad is a Malaysia-based company that specialises in design and development, engineering testing, manufacturing, and stocking paper and plastic-based packaging products.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
