

HeiTech Padu (5028)

Uptick on Radar?

Technical Highlights

The stock seems to have found support at the 20-EMA line during the recent swing. Yesterday, the share price picked up, forming a large green candle at closing and was on the verge of breaking through the 5-month long ascending channel pattern. With the growing momentum (RSI is growing and pointing upward), we think the break-out is underway, signifying more upside may be on the card.

Upward pointing of both the MACD and 20-EMA line indicates short-term bullishness going forward.

If the share price breaks through the ascending channel pattern, we think the stock could potentially put the resistance to test at RM2.59 first and subsequently at RM2.99 (52-week high). Conversely, a dip below RM2.00 (a few points below the recent downswing) could mark the start of a correction phase.

Entry – RM-2.44 – RM2.46

Stop Loss – RM1.90

Target Price – RM2.59 – RM2.99

Technical

Resistance 1 (RM)	2.59
Resistance 2 (RM)	2.99
Support 1 (RM)	2.00
Support 2 (RM)	1.82
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	2.44
52-week High (RM)	2.99
52-week Low (RM)	0.46

Company Profile

HeiTech Padu Berhad is a Malaysian based company that specialise in providing total business solutions in IT which includes system integration, data center management, network related services, and disaster recovery services.

PGF Capital (8117)

Testing Another New All-time High?

Technical Highlights

The past formation of double Marubozu candles sent the share price of PGF Capital to trade above all its EMA lines. Yesterday's jump in the share price, with a large green candle at closing, provided the momentum to break through the approximately 4-week-long pennant pattern. With the considerable momentum (RSI >70), we think the share's uptick potential may be in the offing.

The share's momentum is tied to the recent golden cross indicated by the MACD. Additionally, the upward-pointing 20-EMA line confirms its short-term bullishness.

With the pennant pattern breaking out and positive momentum, we think the share could test the RM2.52 resistance (the new all-time high) and subsequent RM2.69 resistance (grounded based on the difference of RM0.17 between the high and low of the pennant pattern). Conversely, consolidation happens if the share price dips below the RM2.16 support.

Entry – RM-2.42 – RM2.43
Stop Loss – RM2.06
Target Price – RM2.52 – RM2.69

Technical

Resistance 1 (RM)	2.52
Resistance 2 (RM)	2.69
Support 1 (RM)	2.16
Support 2 (RM)	1.85
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	2.42
52-week High (RM)	2.42
52-week Low (RM)	1.15

Company Profile

PGF Capital Berhad is a Malaysia based company that principally engage in designing, manufacturing and distributing glass mineral wool insulation as well as developing and investing in hospitality properties.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
