

SP Setia (8664)

Breakout Backed By Key EMAs

Technical Highlights

The stock has been on a strong upward trend since mid-2023, consistently supported by a macro uptrend line. Although there was a sudden dip in late August, it quickly rebounded after touching this key trendline, regaining its momentum. Last Friday, the stock broke through a downward trendline with impressive buying volume, and yesterday's session closed with a bullish candlestick. The stock is now trading above all three key EMAs, reinforcing its short- and medium-term upward potential after the breakout.

Momentum indicators are further supporting this bullish outlook. The RSI currently stands at 59 and is on the rise. Meanwhile, the MACD formed a golden cross earlier this month, with strong buying pressure driving the stock higher.

The ideal entry range lies between RM1.30-1.36, with RM1.30 aligning with the 50-day EMA, providing a stable buying zone. The first key resistance level is RM1.40, and if the stock breaks above this level, the next target will be RM1.54. A successful push beyond RM1.54 could bring the 52-week high of RM1.70 into play. However, if the stock drops to RM 1.10, it may signal the end of the current uptrend, with a correction potentially underway.

Entry – RM1.30 – RM1.36

Stop Loss – RM1.10

Target Price – RM1.40 – RM1.54

Technical

Resistance 1 (RM)	1.40
Resistance 2 (RM)	1.54
Support 1 (RM)	1.23
Support 2 (RM)	1.10
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	1.34
52-week High (RM)	1.80
52-week Low (RM)	0.72

Company Profile

SP Setia Berhad operates as building contractors and develops, invests, and leases properties. SP Setia also manufactures precast concrete, and prefabricates, installs, and sells woods products.

Mr D.I.Y. (5296)

Eyeing New High

Technical Highlights

The stock has been following a steady uptrend since end-May, maintaining support above the trendline. Last Thursday, it saw a breakout but soon pulled back. Yesterday, the pullback was confirmed with a strong breakout from a bullish wedge, backed by solid buying volume. After a 4.5% gain in yesterday's session, the stock is now trading above all three key EMAs, indicating solid upward momentum and increased buying interest.

Momentum indicators are looking strong. The RSI currently sits at 59 and is steadily climbing. Additionally, the MACD also formed a golden cross yesterday. Both indicators reinforce the stock's potential for continued gains in the near term.

The ideal range is between RM 2.05-2.09, a zone with high buying and selling activity, making it a reliable area for entry. The first key resistance is the 52-week high at RM 2.18. If the stock breaks and holds above this level, the next target will be RM 2.36. On the downside, if the stock falls below RM 1.94, it could head toward RM 1.80 for the next major support, signalling a potential shift toward a downtrend.

Entry – RM2.05 – RM2.09
Stop Loss – RM1.94
Target Price – RM2.18 – RM2.36

Technical	
Resistance 1 (RM)	2.18
Resistance 2 (RM)	2.36

Last Close (RM)	2.08
52-week High (RM)	2.18
52-week Low (RM)	1.37

Company Profile

Mr D.I.Y. Group (M) Berhad operates a chain of department stores. The company offers hardware, electrical, household, jewelry, and cosmetics products.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
