

YLI Holdings (7014)

Wedge Breakout

Technical Highlights

Since early 2023, the stock has been on a solid uptrend, which lasted until mid-2024 when it paused and began to form a falling wedge pattern. Just last week, the stock broke out of this pattern to the upside. On the weekly candlestick chart, we can see the stock closed with a hammer pattern which is a classic sign of strength. It is currently trading above both the 200-day and 20-day EMAs, while testing the 50-day EMA, setting up an interesting move.

Momentum indicators are looking positive. The RSI is sitting at 52, slightly above neutral, and is trending upward, suggesting increased buying pressure. Meanwhile, the MACD has started to rise after months of neutral momentum, supported by rising volume, indicating that momentum could be building up further.

For an ideal entry point, a slight pullback to RM0.55 to RM0.57 range presents a good opportunity. The first major resistance is at RM0.60, and if the stock breaks through that level, the next target would be RM0.64. On the downside, if the stock drops below RM0.51, it will invalidate the bullish falling wedge and signal a potential correction.

Entry – RM0.55 – RM0.57
Stop Loss – RM0.51
Target Price – RM0.60 – RM0.64

Technical

Resistance 1 (RM)	0.60
Resistance 2 (RM)	0.64
Support 1 (RM)	0.54
Support 2 (RM)	0.51
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	0.57
52-week High (RM)	0.82
52-week Low (RM)	0.31

Company Profile

YLI Holdings Bhd manufactures and markets ductile iron pipes and fittings, saddles, manhole covers and cast-iron pipes. They also trade UPVC pipes and fittings, manufactures raw materials for foundry use, and invest property.

Superlon (7235)

Uptrend Resumes Strongly

Technical Highlights

After a prolonged consolidation phase, the stock broke out and reached a new 52-week high in June 2024. Following that high, the price retraced down to a solid support zone at RM0.815, where it bounced off this level four times on the weekly candlestick chart, highlighting strong buying interest. After holding at this support level, the stock broke out and rallied over the next two weeks. It's currently trading above all three key EMAs, suggesting continued bullish strength.

Momentum indicators are also showing a promising outlook. The RSI sits at 53, having bounced back from oversold conditions, and is now trending upward after months of neutral movement. At the same time, the MACD is approaching a golden cross, signaling a potential shift in momentum. Additionally, the selling volume has dropped significantly, while buying volume has surged to its highest level since July 2024.

Following a strong 10% surge last week, a slight pullback presents a good opportunity for entry. Ideally, entering between RM1.00 and RM1.03 would offer a favourable position. The first resistance is at RM1.09, and if broken, it could quickly target RM1.20. On the downside, if the stock falls to RM0.89, it may retest the strong support at RM0.815, which could lead to sideways movement.

Entry – RM1.00 – RM1.03
Stop Loss – RM0.89
Target Price – RM1.09 – RM1.20

Technical

Resistance 1 (RM)	1.09
Resistance 2 (RM)	1.20
Support 1 (RM)	0.97
Support 2 (RM)	0.89
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	1.03
52-week High (RM)	1.43
52-week Low (RM)	0.65

Company Profile

Superlon Holdings Bhd design, tests, and manufactures thermal insulation materials for the heating and air conditioning industry.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
