

Genting Berhad (3182)

From Downtrend to Breakout

Technical Highlights

Since early 2024, this stock has been trending downward, but within this decline, a bullish falling wedge pattern has been formed. Last week, the stock managed to break out of this pattern but initially moved sideways for a few days. However, yesterday the stock has fully confirmed the breakout with the highest buying volume since early August. Currently, the stock is trading above the 20-day EMA, indicating short-term strength, though it remains below both the 50-day and 200-day EMAs.

Momentum indicators are showing a positive outlook. The MACD saw a golden cross in early September and continues to trend upward, with the potential for another golden cross if buying momentum strengthens. The RSI, which stayed in neutral momentum for several months, has now risen to 53 following yesterday's breakout and is moving higher, reflecting renewed bullish momentum.

Waiting for a slight pullback to the RM4.17–RM4.23 range could present an ideal entry point. The first resistance to watch is RM4.44, and if it breaks, the stock could aim for the next target at RM4.65. This level, previously a strong support, now acts as a significant resistance. A breakout above RM4.65 would suggest a shift into a sustained uptrend. On the downside, if the stock falls below RM4.01, it could trigger a major correction, as this level has been a key support since 2021.

Entry – RM4.17 – RM4.23
Stop Loss – RM4.01
Target Price – RM4.44 – RM4.65

Technical

Resistance 1 (RM)	4.44
Resistance 2 (RM)	4.65
Support 1 (RM)	4.10
Support 2 (RM)	4.01
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	4.23
52-week High (RM)	5.20
52-week Low (RM)	4.01

Company Profile

Genting Berhad provides leisure and hospitality, gaming, and entertainment businesses. Genting also operates plantations, develops and manages property, provide tours and travel related services and manufactures.

Oriental Food (7107)

Riding the Rebound Wave

Technical Highlights

The stock experienced a strong uptrend in early 2024, before entering a period of sideways movement from March through July. In August, it shifted into a downtrend while quietly forming a triangle pattern. Last week, the stock broke out of the triangle and successfully completed a pullback above the downtrend line. With yesterday's impressive 4% rebound, the stock is now trading above all three key EMAs, signaling a potential return to bullish momentum.

Momentum indicators are flashing positive signs. The RSI currently stands at 56 and is trending upward, leaving plenty of room before reaching overbought levels. Interestingly, even during the recent downtrend, the RSI formed higher lows, indicating underlying strength. The MACD is also moving upward with sustained bullish momentum.

An ideal entry point for this stock would be within the RM1.79 to RM1.85 range. The first resistance is set at RM1.90, and if the stock breaks this level, it could challenge RM2.08, a major resistance point. A breakthrough beyond RM2.08 could push the stock toward its 52-week high if momentum continues. On the downside, if the stock falls below RM1.68, it will indicate a false breakout, likely triggering a correction toward RM1.55, a previous accumulation zone.

Entry – RM1.79 – RM1.85
Stop Loss – RM1.68
Target Price – RM1.90 – RM2.08

Technical

Resistance 1 (RM)	1.90
Resistance 2 (RM)	2.08
Support 1 (RM)	1.74
Support 2 (RM)	1.68
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	1.84
52-week High (RM)	2.18
52-week Low (RM)	1.18

Company Profile

Oriental Food Industries Holdings Berhad manufactures, markets, and sells snack food and confectioneries. The company also manufactures and wholesale candies, chocolate products and other preserved food.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
