## Falling Wedge Breakout – Trend Shift?

### Technical Highlights

The stock has been in a downtrend since July 2024, forming a falling wedge pattern along the way. Yesterday, it broke out of this pattern, leaving the previous squeeze zone with a 6.5% gain, signalling a potential trend reversal. The stock is now trading above its 20-day EMA and challenging the 50-day EMA, with the 200-day EMA as the next hurdle to clear.

Momentum indicators are aligning well with this breakout. The RSI sits at 59, moving upward with strength, suggesting growing buyer interest. The MACD also formed a golden cross last month and continues to rise. This upward movement reflects an increase in buying activity, adding to the stock's bullish outlook in the short term.

An ideal strategy here could be to wait for a pullback between RM0.88 and RM0.90 as a potential entry point. The first key resistance lies at RM0.96, and a successful break here could open a path toward RM1.05—a previous consolidation zone that may present a challenge. On the downside, a drop below RM0.83 could lead to further correction toward RM0.66.

**Entry** – RM0.88 – RM0.90  
**Stop Loss** – RM0.83  
**Target Price** – RM0.96 – RM1.05

#### Technical

<b>Resistance 1 (RM)</b>	0.96
<b>Resistance 2 (RM)</b>	1.05
<b>Support 1 (RM)</b>	0.86
<b>Support 2 (RM)</b>	0.83
<b>MACD</b>	Positive
<b>RSI</b>	Positive

#### Stock Information

<b>Last Close (RM)</b>	0.90
<b>52-week High (RM)</b>	1.37
<b>52-week Low (RM)</b>	0.82

#### Company Profile

Ann Joo Resources Berhad trades, retails, and supplies building and construction materials and steel and iron products.

## Fresh Breakout – What’s Next?

### Technical Highlights

The stock has been oscillating between RM0.41 to RM0.56 and recently formed a triangle pattern. Yesterday, it broke out of this pattern with a solid 9.3% gain, signalling that momentum might finally be shifting upward. Currently, the stock is trading above its main support at the 200-day EMA, while challenging both the 20-day and 50-day EMAs, which could further confirm a bullish outlook if sustained.

Momentum indicators are looking good. The RSI has climbed to 50, showing signs of renewed buying interest after a two-month neutral stretch. Additionally, the MACD also shows a pattern of rebound as selling pressure has gradually eased.

An ideal strategy would be to enter between RM0.455 and RM0.465, capitalising on a potential pullback before a further move upward. The first key resistance is at RM0.490, with a breakthrough potentially paving the way toward RM0.560, near the 52-week high. On the downside, a drop below RM0.430 may signal a correction, likely testing the final support around RM0.405.

**Entry** – RM0.455 – RM0.465  
**Stop Loss** – RM0.430  
**Target Price** – RM0.490 – RM0.560

### Technical

<b>Resistance 1 (RM)</b>	0.490
<b>Resistance 2 (RM)</b>	0.560
<b>Support 1 (RM)</b>	0.445
<b>Support 2 (RM)</b>	0.430
<b>MACD</b>	Positive
<b>RSI</b>	Positive

### Stock Information

<b>Last Close (RM)</b>	0.470
<b>52-week High (RM)</b>	0.565
<b>52-week Low (RM)</b>	0.405

### Company Profile

Scanwolf Corp Bhd. manufactures and markets furniture profiles and fitting. The Company's products include soft PVC, co-exclusion profiles, and edging stripes.

## Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none"><li>- current high less the current low;</li><li>- the absolute value of the current high less the previous close;</li><li>- the absolute value of the current low less the previous close;</li></ul>
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
