

Awanbiru Technology (5204)

Nearing Pattern Breakout

Technical Highlights

The stock has been trading in a sideways pattern since mid-July, following its 52-week high. However, late November saw renewed buying interest, pushing the stock into a series of higher highs and higher lows. At the last closing price of RM0.360, the stock is approaching a critical channel breakout level at RM0.365. Sustained buying momentum could support the pattern breakout, reinforcing the stock's bullish outlook.

Momentum indicators are also supportive. The RSI continues to trend upward, signalling increasing buying interest, while the MACD remains positive, further supporting the near-term bullish momentum.

An ideal entry range lies on RM0.350 to RM0.360. A breakout above RM0.365 would confirm the channel breakout, potentially fuelling the stock to test its next resistance level at RM0.395. There is a potential of further upside to RM0.410 if momentum persists. Conversely, a dip below RM0.320 would signal a re-entry into the consolidation phase, with potential downside support near RM0.290.

Entry – RM0.350 – RM0.360

Stop Loss – RM0.300

Target Price – RM0.365 – RM0.395 – RM0.410

Technical

| | |
|--------------------------|----------|

Company Profile

Awanbiru Technology Berhad is a company specializes in providing information and communication technology software and training, multi cloud management and training and certification services.

Hibiscus Petroleum (5199)

Trend Reversal Ahead?

Technical Highlights

After peaking at its 52-week high, the stock entered a consolidation phase, showing limited recovery as buying interest remained muted. Following its trough at a 52-week low in mid-December, renewed buying interest has driven the stock into an upward trajectory. Yesterday, sustained bullish momentum pushed the stock higher, confirming a triangle pattern breakout and signalling a potential trend reversal.

Momentum indicators are showing strength and supportive of this positive setup. The RSI is picking up, indicating the buying interest is accumulating. Meanwhile, the build-up of the stock's positive momentum is ascertained by the recent exhibition of a golden cross in the MACD.

Waiting for a slight retracement to the price range between RM2.01 and RM2.03 represents a good entry opportunity. The first resistance is set at RM2.05, and if the stock breaks this level, it could challenge RM2.10. A potential breakout beyond this point could form a stage for the stock to challenge its subsequent target at RM2.17. However, a decline below RM1.94 would invalidate the breakout and suggest a return to consolidation mode.

Entry – RM2.01 – RM2.03

Stop Loss – RM1.91

Target Price – RM2.05 – RM2.10 – RM2.17

Technical

| | |
|-------------------|----------|

Company Profile

Hibiscus Petroleum Bhd is a company that acts as an independent upstream exploration and production that explores oil and gas.

Glossary of commonly used technical terms

| | |
|--|---|
| Exponential Moving Average (EMA) | An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points. |
| Moving Average Convergence Divergence (MACD) | A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals. |
| Stochastic | A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result. |
| Average True Range (ATR) | A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close; |
| Bollinger Band | A band plotted 2 standard deviations away from a simple moving average. |
| On-Balance Volume (OBV) | A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security. |
| Support | The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock. |
| Resistance | The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level". |
| Reversal | A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows. |
| Divergence | When the price of an asset and an indicator, index or other related asset move in opposite directions. |
| Overbought | In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback. |
| Oversold | A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors |
