## Pattern Breakout Backed by W Pattern

### Technical Highlights

The stock found support at the 200-EMA line following a consolidation phase after peaking in late May 2024. Subsequently, the stock recovered gradually in line with the resurgence of buying interest. However, the stock re-entered the corrective phase, consolidating within a defined range and forming a falling triangle pattern. At the closing yesterday, the stock successfully broke out of the triangle pattern, signalling a potential trend reversal. With the pattern breakout supported by the formation of a typical W-pattern, we see this establish a solid technical ground for further upside momentum in the stock.

Momentum indicators are showing positive signals which validate the pattern breakout. The RSI is rebounding sharply, indicating a strong resurgence in bullish momentum. Meanwhile, the rebound in buying interest yesterday also confirmed the golden cross formation, supporting the case of a bullish outlook.

An ideal range would be between RM1.39 and RM1.40, waiting for a slight pullback for better positioning. The immediate resistance to monitor is RM1.45, and a potential breakout above this level could pave the way for a further upside toward RM1.53. Conversely, a drop below RM1.33 would invalidate the breakout, signalling a potential return to consolidation.

**Entry** – RM1.39 – RM1.40  
**Stop Loss** – RM1.30  
**Target Price** – RM1.45 – RM1.53

#### Technical

<b>Resistance 1 (RM)</b>	1.45
<b>Resistance 2 (RM)</b>	1.53
<b>Support 1 (RM)</b>	1.33
<b>Support 2 (RM)</b>	1.27
<b>MACD</b>	Positive
<b>RSI</b>	Positive

#### Stock Information

<b>Last Close (RM)</b>	1.40
<b>52-week High (RM)</b>	1.78
<b>52-week Low (RM)</b>	1.17

#### Company Profile

Harbour-Link Group Berhad through its subsidiaries specializes in providing shipping, forwarding and transportation services.

## Double Bottom Breakout

### Technical Highlights

After peaking in mid-July 2024, the stock entered a broad consolidation phase, gradually retracing toward its 52-week low. However, renewed buying interest has driven a strong recovery, establishing a pattern of higher highs and higher lows. Recently, the stock's bullish momentum persisted, leading to a confirmed double-bottom breakout. Yesterday's session saw a continued upward close, validating the breakout. With the pattern confirmation supported by a bullish technical setup, the stock appears poised for further upside in the near term.

Momentum indicators are looking strong with the RSI continued to trend upward and recent exhibition of golden cross in the MACD.

The ideal entry range for this stock is between RM0.97 and RM0.99. The first resistance level to watch is RM1.02, followed by a stronger resistance at RM1.08. A successful breakout beyond these levels could see the stock climb toward RM1.12. On the downside, if the stock drops below its recent support level of RM0.90, it would indicate that the recent breakout was a false move, signalling a return to the downtrend. For stop loss, it can be set at slightly lower than the recent support level at RM0.89.

**Entry** – RM0.97 – RM0.99

**Stop Loss** – RM0.89

**Target Price** – RM1.02 – RM1.08 – RM1.12

#### Technical

Resistance 1 (RM)	1.02
Resistance 2 (RM)	1.08
Support 1 (RM)	0.90
Support 2 (RM)	0.86
MACD	Positive
RSI	Positive

#### Stock Information

Last Close (RM)	0.99
52-week High (RM)	1.34
52-week Low (RM)	0.86

#### Company Profile

HSS Engineers Berhad is a company primarily engages in providing engineering and project management services.

## Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none"><li>- current high less the current low;</li><li>- the absolute value of the current high less the previous close;</li><li>- the absolute value of the current low less the previous close;</li></ul>
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
